

Better Report Cards with ESGI

Simplify the report card process by generating clear, standards-aligned data that communicates student progress to families. This approach is especially useful for early elementary grades where narrative or skills-based report cards are preferred. By using ESGI, teachers and administrators can streamline reporting and strengthen family engagement.

Why It Works

Clear, easy-to-understand format for families

Multilingual options ensure accessibility for all households

Aligned to the skills and standards you're already tracking

Saves time with no manual calculation or formatting required

Builds stronger home-school communication by showing both detail and big-picture progress

By combining two existing reports—the Student Detail Report and the Parent Letter—educators can create an effective, personalized report card alternative.

How to Create a Report Card with ESGI

- 1. Complete student assessments across the desired skills and subjects.
- 2. Generate the Student Detail Report for each student. This report shows individual performance on specific assessments, highlighting mastered and unmastered skills.
- **3.** Generate the Parent Letter. This includes overall summaries, skill areas, and grade scales, and is available in multiple languages.
- 4. Combine both reports by printing them together or stapling them into a single packet.
- 5. Send the combined report home to families as your report card substitute or supplement.
